

# NIZA NYIMBILI

Part II Architectural Assistant

## Employment

I am working for BDP, an architectural practice in Manchester, whilst I complete the second stage of training to be an architect. My job consists of producing drawings and 3D models for construction, as well as visuals and presentations for clients around the world.

### What do you love most about your job?

I love the impact a building can have on people and the way they live. I also love working collaboratively and sharing ideas with people in my office. I learn a lot from them.

### What is the hardest part of your job?

The administrative side of architecture includes learning about law and contracts and this is the most difficult bit for me. A simple mistake can cost the clients and the architects a lot of money.

## Education

### I attended Audenshaw School from 2008 to 2013

I did A levels in art, maths, physics and geography  
Art was always my favourite subject.  
I enjoyed drawing and learning about all the different techniques.

I completed a BA (Hons) in Architecture RIBA Part I at University of Huddersfield. I went back there after a year working for an architect in Leeds to complete my master's degree (RIBA Part II).

### Top three tips for current students

1. If you know what you want to do, or have something you enjoy doing, do it more often. Practice at home and during your holidays. Research it as a job and see what you need to do to get to where you want to be.
2. Ask people if they can help you or if they know someone who can but also, use all the resources you have. If you want to learn something new, there will always be a tutorial somewhere online.
3. Keep in touch with the people in your class, you might need them one day!

### What is your favourite memory of Audenshaw?

All the time I spend in Art class developing my own ideas.
